

PRODUCTION LINES

TECHNICAL DATA

All FORMIT products are designed to fit the needs of the fresh cut sector. The production machines can be used as stand-alone units or be combined into production lines.

FORMIT offers you equipment for complete production lines.

FORMIT product range

Type	Description	Capacity
ProX	Profiler	50-150 kg/h
ProXL	Profiler	250-500 kg/h

COMBI	Combi-5	250-600 kg/h
	Combi-1000	600-1000 kg/h
	Combi-3000	2500-9000 kg/h

CUTM	Hand operated chateau-cutter	

Due to continual improvements, strict accuracy of description and illustrations cannot be guaranteed.

**AN ATTRACTIVE FORM
OF FOOD PRESENTATION**

Peeling

The FORMIT Combi-peeler is manufactured to fit the needs of the fresh cut sector for the peeling of potatoes and similar root vegetables. The advantage of the FORMIT Combipeeler lies in the innovative construction of its peeling elements. The Combi-peeler produces a knife peeled like end product in one machine using stainless steel tools (abrasive and cutting) through the whole process.

Profiling

The FORMIT profilers are designed for continuous use in the food processing industry and vegetable preparation units. The profilers are manufactured of stainless steel and aluminium. The profilers are produced in different sizes and models. The ProX for capacities up to 150kg/h with diameters up to 31mm and the ProXL for bigger capacities and bigger diameters.

Cutting

The FORMIT CUT chateau / barrel cutter produces perfect chateau / barrel shaped products without any variation. The raw material is processed carefully in the chateau cutter machine, causing no damage to the final product. The standard FORMIT CUT produces a final product with seven sides.
